Hamtronics still sells good receiver kits, including one with extra-tight
front-ends (helical filters). Friends of mine have had good success with
them. I've had good luck wth several of their toucht-one decoder boards
-- work great and keep working.

Another high level repeater which is open is 449.6375 with a 103.5 PL,
the only trouble is that sometimes the element tries to trash it.
449.65 and 449.625 are paper repeaters.

We'd like nothing more than hams using the repeater for communications.
However, at times you may not be able to key it up because its been put
in DPL only mode which is sad.
give it a try.

SB TAPR @ TAPR \$TAPR801.001
NEWS: TAPR to make available ARRL CNC and DC Proceedings

Please use BID: \$TAPR801.001

Tucson Amateur Packet Radio August 1st, 1994

TAPR to make available ARRL CNC and DC Proceedings

TAPR has arranged an agreement with the ARRL to be the distribution point
of past proceedings of the ARRL Computer Networking Conferences and Digital
Conferences. This will apply to proceedings that are more than two years
old. For example, the ARRL will continue to distribute the 12th (1993)
and 13th (1994) proceedings this year, then next year TAPR will begin to

distribute the 12th (1993).

In this way, TAPR and the ARRL hopes that these proceedings will be fully available to digitally interested hams. Proceedings should be available from the TAPR office the end of August.

TAPR would like to thank Mark Wilson, AA2Z, and Jon Bloom, KE3Z, for their help at the ARRL with this arrangement.

There has been interest in having many of the papers available in electronic form. TAPR will begin to work on contacting authors for permission to generate computer versions of many of the papers. If you are an author of an ARRL CNC or DC proceedings paper and would like to give TAPR permission to make available your paper electronically, please send e-mail to tapr@tapr.org. If you have the paper in electronic form already, please send that also. More on this project as it forms.

Greetings! I just acquired an old kenwood TR-2400 with a dead battery and no charger. If you have any accessories lying about for this radio that you no longer need, I'd like to buy them.

If you are in or near the bay area (CA), and have one of these radios, would it be possible to meet and swap in one of your charged batteries to make sure this thing functions before sinking any significant quantities of cash into it? It would only require about 1 minutes use of the battery to check. Thanx.

Also, can anyone point me to a tone unit that would work in this radio.
